- Plugin loaded from database.
 - Generic hook is currently in place for file monitor.
- Passdowns on plugin designs and concepts from group 3 to PFG was successful
 - Several documents were released to PFG for development reference.
 - General feedback on the documents were good.
- Huang and Keane had started working on the GUI plugin
 - Ticket 66 is aimed to be converted into a plugin.

2. Next steps

- Daemon “face-lift” is in progress
 - Fil: File monitor had been re-written.
- API methods decomposition is in progress. API and plugin standard programming conventions have been set.
 - Cui, Keana, Ida and Huang are working on this.
 - David wants more plugins as examples to convince the customer.
- An extra plugin is currently in the plan for next week presentation.

3. Opens

- David: Document all the issue faced during development.
- Li: Seconded David’s comment on documenting the investigation process.
- David stressed a lot on documentation.
- David suggested present the incremental progress development to the customer will be good.
- David: What about Rails plugins?
 - It was discussed and agreed that if plugins are developed based on Rails plugins, there will be a deployment problem on a server-farm like architecture.
