Software Engineering Group Project
Activities Report
for
Mohammad Bamogaddam, Group2
Milestone 3
Student ID: 1144332

Objective:

This report records my activities related to Earth project development for Milestone3 period from 24/5/2008 to 13/6/2008.

Activities:

1. Configuration Management: create my own earth fork to work on it instead of working on the group's repository

2. Coding: separate the metadata functionalities into separate plug-in files so that it will be easier to upgrade them later. Check the commit at: http://github.com/mfb1982/earth/commit/045e3d86ebabbb4ab33070cd78d4d3eefe9b6065

3. Coding: fix the deleting folder problem after adding the metadata. Check the commit at: http://github.com/mfb1982/earth/commit/905199e777e026b35fe9ababa8c5fa428dc42019

4. Reviewing other developers' code in the plug-ins and the view part. This includes correcting syntax and semantics errors.

5. Milestone 3 integration to the group's repository from individuals' repositories.

6. Prepare demo for our group progress on milestone 3.
