Attendees: David, Ken, Jon, Hill

Next Meeting: 13/07/2008 (Monday) @ 1100 hours

- PM:
    - Hill presented mileston 3
    - We are basin on Hill founds (similar to how eclipse do plugins)
    - Desadvantage of kens way: to many changes in several files
- suggestion / comments / tips
    - Most of the tickets read form data instead of files
    - Plugins are base on the tickets
    - Plugins are independents
    - We must have a work that represent 150 hours of work
    - Write some code just to see if it works, it does not have to be prefect
    - Just write enough to move into the next stage
    - Do incremental type approach
        * a.2.b should not take that long
        * Just look a one plug-in and find where its particular hooks should go.
        * don't invest to much time finishing one task, do incremental for specific plug-in
    - suggestion David for presentation
        * Present two versions of file monitor: Standar version and extended version doing some RSP stuff
        * Prototype for M4
        * Demonstration : file monitor as plug-in using the API and 2 more things: similar/different plugins (do same thing different way)
        * Describe why a design is good or bad
- assessment / reports:
    - Individual Reports
        * What you did in the 3 weeks
        * How much time expended in activities in daily basis, how much time you expend and how much should you expend
        * Progress, challenges, inspected circumstances
    - Group Report
        * What was completed and what was not completed
        * How much time in total was expend for the group and how much time should it be spent (expected)

* Why did we went under/over budget
* Task that remain unfinished and plan to complete those (should it be done by the group or go back into the general pool of tasks
* Demonstration
* Stuff that was put into the repository
* Describe why a design is good or bad
